

Medical Case Management

Medical Case Management

- Improve Patient Care
- Reduce Health Costs
- Rapid Development, Preserve ROI

Problem Description

A large Midwestern hospital system required an interim method to administer a new program for outpatient management of chronic illnesses such as asthma, diabetes, and heart failure during development of their new enterprise-wide solution. Low cost and rapid development were key needs to meet their immediate goals of improved patient care and reduced health costs.

AIM Solution

AIM met with hospital operational, technical, and compliance personnel to develop a specification and become familiar with specialized requirements for handling medical data. A comprehensive program management system was developed that interfaced with the existing hospital database and provided a custom user interface with extensive reporting and maintenance capabilities.

Benefits

The AIM system was designed and implemented within three months allowing the hospital to rapidly deliver program benefits to patients and realize health care cost savings with minimal impact on ROI during development of the enterprise-wide system.

Why choose AIM?

Choose AIM to guarantee a quality project managed by a hands-on project manager, engineer, MBA, with Six Sigma quality credentials and decades of experience not only designing and implementing productivity and management solutions, but using them as a “real-world” professional manager.

Choose AIM to ensure your project does not go over budget. AIM can offer fixed or ROI-based pricing. Over many years and dozens of projects, AIM has never exceeded a fixed priced budget – and never will.

Choose AIM to reduce delays and missed deadlines. AIM eliminates needless layers of management and communication obstacles inherent to traditional project teams.

Choose AIM because you want a partner with both a winning attitude and record that brings a competitive advantage to your team.
