

Supply Chain Performance Management

Supply Chain Performance Solution

- Analyze On-Time Supplier Delivery
- Analyze Supplier Quality
- Automate & Send Supplier Scorecards

Problem Description

A Fortune 1000 manufacturing firm was interested in reducing software maintenance costs and expanding the capabilities of its legacy, ERP-based supplier performance monitoring system.

AIM Solution

AIM developed interfaces to the company's SAP and CINCOM ERP systems and automated the process of downloading purchase order, receipts, supplier, lead time, and reject data on a daily batch basis. The data was used to analyze supplier On-Time Delivery (OTD) performance and Parts per Million (PPM) reject data and to automatically forward a Supplier Scorecard performance report to all suppliers on a monthly basis. Additionally, the system provided custom management reports and tools for buyers to track and handle unique purchasing instances on an exception basis.

Benefits

Supplier management was improved and project payback was achieved in less than six months on the basis of avoided software maintenance costs alone.

Why choose AIM?

Choose AIM to guarantee a quality project managed by a hands-on project manager, engineer, MBA, with Six Sigma quality credentials and decades of experience not only designing and implementing productivity and management solutions, but using them as a "real-world" professional manager.

Choose AIM to ensure your project does not go over budget. AIM can offer fixed or ROI-based pricing. Over many years and dozens of projects, AIM has never exceeded a fixed priced budget – and never will.

Choose AIM to reduce delays and missed deadlines. AIM eliminates needless layers of management and communication obstacles inherent to traditional project teams.

Choose AIM because you want a partner with both a winning attitude and record that brings a competitive advantage to your team.
